

POSTOPERATIVE DROPS

1. The drops prescribed by the doctor are to be used in the nose (not eyes).
2. Please take the content of your *** drops and empty them into a dropper bottle. (i.e. Tylenol infant drops). This will help you apply drops correctly.
3. Use 3-4 drops *** side(s) two times a day (AM-PM). Do this for 3-4 weeks.
4. After applying drops (see above) please remain in the tilt position for 3-5 minutes. This helps the drops absorb.
5. If you are doing nasal irrigations-apply drops after irrigations.

Any questions, call Mary Umbriaco at (708) 216-3664.
