Reading: Attached handout should be adequate for your course and national exams. For a more comprehensive approach or clarifications consult Kaplan & Sadock’s Comprehensive Psychiatry – 4th edition – or DSM 5 available online through LUMC library.

Objectives:
1. Identify the common signs and symptoms in Major Depression Disorder and Bipolar Disorder. Know the DSM 5 criteria for Major Depression Disorder and Bipolar Disorder
2. Differentiate the differences between Major Depression and some other mood variants including Persistent Depressive Disorder, Substance Induced Disorder, Medically Induced Disorder, Premenstrual Dysphoric Disorder, and Major Depression with atypical, melancholic, psychotic, seasonal, or recurrent subtypes
3. Describe the course of Major Depression Disorder and Bipolar Disorder including time frames, prognosis, and co-morbidities
4. Contrast some of the current neurobiological, psychological, and social theories of Major Depression
5. Restate the Epidemiological factors in Major Depression and Bipolar Disorder and their burden of disease in society
6. Compare the different presentation modes of depression in different populations
7. Distinguish the presentations of Bipolar Disorder depressed type with Major Depression Disorder
8. Diagram the differences in suicidal ideation, intent, and attempt
9. Evaluate the risk factors and protective factors in the epidemiology of suicide attempts in an individual patient
