

Policies and Instructions:

The Patient Centered Medicine 4 Course is graded Pass/Fail. Any failure to complete all required assignments by the end of the rotation (November 22, 2024 at 11:55pm for 10B and December 20, 2024 at 11:55pm for 10C) will result in PCM4 Failure

1. Attendance of at least ONE Value-based Care discussion session is required. Students should select one of the four discussion dates and sign up. See Sakai for details. The discussions will be monitored for active participation. Failure to attend at least one Value-based Care discussion will result in failure of the course.
2. Completion of all modules, assignments, and projects is required. There is a check list to keep organized.
3. The Pain Quiz that corresponds with the Pain and Opioid Lecture and Lab Science lecture quizzes must be passed at a score of 80%. There is no time limit for this assessment. Quizzes can be submitted up to 3 times. If multiple submissions are required, answers from previous attempts will not be available within the assessment during subsequent attempts. The highest score will be recorded. Failure of the quiz after 3 attempts will result in a consultation with the Course Director for further remediation plan.

IMPORTANT: Students who do not successfully complete all of the assignments will receive an F course grade. The F grade can be remediated by completing the missing assignment within a *designated time period* but can only be converted to a P* grade. The P* grade is defined on the Stritch transcript key as a Remediated Pass. A single F grade not successfully remediated by a *designated time period* will result in an inability to graduate.
